C4 model

TRIFORK.
Software Architecture for Developers
2-day masterclass | May 12-13 | Amsterdam, Netherlands

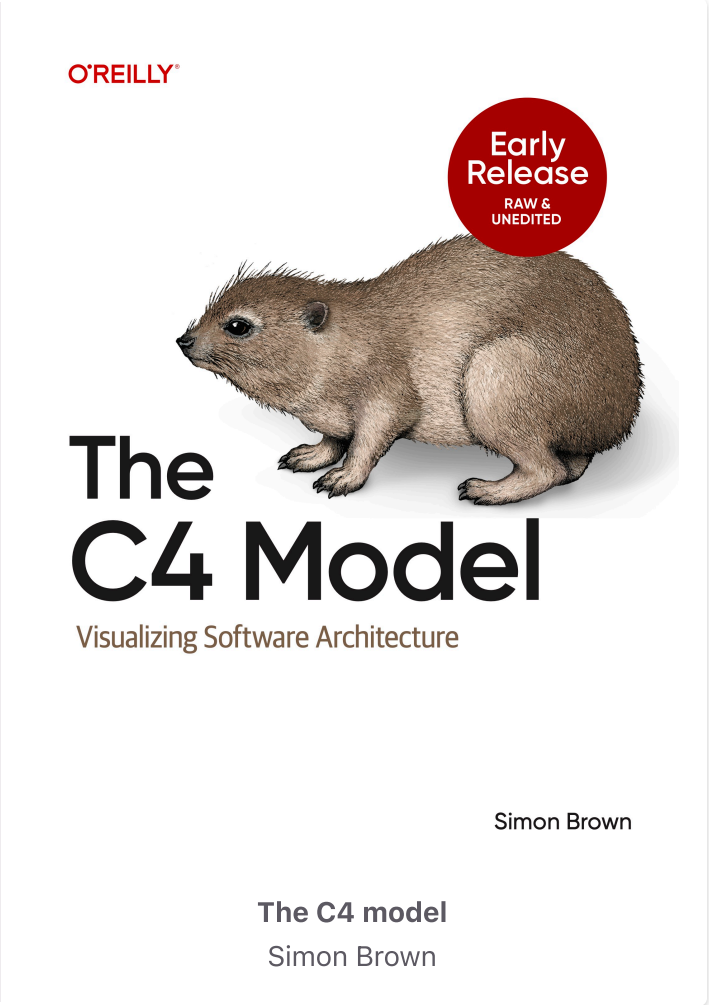
The C4 model for visualising software architecture

The C4 model is an easy to learn, developer friendly approach to software architecture diagramming:

1. A set of hierarchical abstractions - software systems, containers, components, and code.
2. A set of hierarchical diagrams - system context, containers, components, and code.
3. An additional set of supporting diagrams - system landscape, dynamic, and deployment.
4. Notation independent.
5. Tooling independent.

Visualising software architecture with the C4 model

Recorded at "Agile on the Beach 2019", July 2019



The C4 model
