Sample Apps for AWS Generative AI CDK Constructs

This repo provides samples to demonstrate how to build your own Generative AI solutions using AWS Generative AI CDK Constructs.

Getting started

Use Case	Description	Type	Language
SageMaker JumpStart model	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting a Llama 2 foundation model developed by Meta from Amazon JumpStart, and an AWS Lambda function to run inference requests against that endpoint.	Backend	TypeScript
SageMaker Hugging Face model	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting a model (Mistral 7B) from Hugging Face, and an AWS Lambda function to run inference requests against that endpoint.	Backend	TypeScript
SageMaker Hugging Face model on AWS Inferentia2	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting a model (Zephyr 7B) from Hugging Face, and an AWS Lambda function to run inference requests against that endpoint. This sample uses Inferentia 2 as the hardware accelerator.	Backend	TypeScript
SageMaker custom endpoint	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting a model with artifacts stored in an Amazon Simple Storage Service (S3) bucket, and an AWS Lambda function to run inference requests against that endpoint. This sample uses Inferentia2 as the hardware accelerator.	Backend	TypeScript
SageMaker multimodal custom endpoint	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting llava-1.5-7b, with artifacts stored in an Amazon Simple Storage Service (S3) bucket, a custom inference script, and an AWS Lambda function to run inference requests against that endpoint.	Backend	TypeScript

Use Case	Description	Type	Language
SageMaker image to video endpoint	This sample provides a sample application which deploys a SageMaker async endpoint hosting stable-video-diffusion-img2vid-xt-1-1, with artifacts stored in an Amazon Simple Storage Service (S3) bucket, a custom inference script, and an AWS Lambda function to run inference requests against that endpoint.	Backend	TypeScript
LLM on SageMaker in GovCloud PDT	This sample provides a sample application which deploys a SageMaker real-time endpoint hosting Falcon-40b on GovCloud PDT.	Backend	TypeScript
Amazon Bedrock Agents	This sample provides a sample application which deploys an Amazon Bedrock Agent and Knowledge Base backed by an OpenSearch Serverless Collection and documents in S3. It demonstrates how to use the Amazon Bedrock CDK construct.	Backend	TypeScript
Python Samples	This project showcases the utilization of the 'generative-ai-cdk-constructs' package from the Python Package Index (PyPI).	Backend	Python
.NET Samples	This project showcases the utilization of the 'Cdklabs.GenerativeAiCdkConstructs' package from nuget library.	Backend	.NET
Contract Compliance Analysis	This prototype can potentially help you make your contract compliance process more efficient, leveraging Generative Artificial Intelligence (GenAI) to evaluate contract clauses against predefined guidelines and to provide feedback on adherence to standards applicable to you, based on your instructions. This is achieved through workflows that leverages Large Language Models via Amazon Bedrock.	Backend + Frontend	Python for Backend, TypeScript (React) for Frontend
Multimodal RAG solution	This project showcases Amazon Bedrock multimodal features using Amazon Bedrock Data Automation (BDA) combined with Amazon Bedrock Knowledge Bases for a RAG-based chatbot.	Backend + Frontend	Python for Backend, TypeScript (React) for Frontend
RFP Answers with GenAI	This project automates RFP (Request for Proposal) responses by using Amazon Bedrock's LLMs to generate answers based on your company's existing knowledge base. Key features include direct Excel file processing for questions and answers, Bedrock AgentCore Runtime with agents and tools for sophisticated question answering, and S3 Vectors for simplified vector storage.	Backend + Frontend	Python for Backend, TypeScript (React) for Frontend
Code Expert	This project addresses the scalability limitations of manual code reviews by leveraging artificial intelligence to perform expert code reviews automatically. It leverages the Bedrock Batch Step Functions CDK construct.	Backend	Python for Backend and Demo, TypeScript for CDK
Bedrock Agent UI Wrapper	This sample provides a CDK construct that creates an API layer and frontend application for Amazon Bedrock Agents. It includes authentication with Amazon Cognito, agent trace streaming, and can be deployed locally or on ECS Fargate.	API layer + Frontend	Python
Stateless MCP Server on AWS Lambda	Sample MCP Server running natively on AWS Lambda and API Gateway without any extra bridging components or custom transports and a test MCP client.	API layer	TypeScript
Stateless MCP Server on ECS	Sample stateless MCP Server running natively on ECS Fargate and ALB without any extra bridging components or custom transports and a test MCP client.	API layer	TypeScript
Stateful MCP Server on ECS	Sample stateful MCP Server running natively on ECS Fargate and ALB without any extra bridging components or custom transports and a test MCP client.	API layer	TypeScript
Speech to speech	Real-time Speech to Speech solution with Amazon Nova Sonic, featuring a Java WebSocket server and React frontend.	Backend + Frontend	Python for Backend, TypeScript (React) for Frontend

Use Case	Description	Type	Language
Strands Lambda	This folder contains demos showcasing the Strands Agents Python SDK		Python for
